(a) lattice, 256^3--576^3
$X_0 \propto \ell_1$
linear in ℓ_1
power, $p = 1.35 \pm 0.31$
4 networks per mass
12 networks per mass
soft momentum X_0 (string-independent part)
$\ell_1 = \ln(m_r/H)$ at the onset of the collapse
(b) extrapolation to $\ell \simeq 90$
$X_{\rm univ}$ (+49)
$X_0(\ell)$; squares: $X_{\rm univ}$
constant (disfavoured)
ℓ
